

Project Report: Creative Animated Website

1. Project Title

My Sample Project – A Creative Animated Website

2. Introduction

This project is a creative and animated website built using HTML and CSS. It features smooth scroll effects, a visually appealing layout, and responsive design using AOS (Animate On Scroll). The goal was to learn web development by designing an interactive and functional site.

3. Technologies Used

- HTML5
- CSS3
- AOS (Animate on Scroll) Library
- Font Awesome (Icons)
- GitHub Pages (for hosting)

4. Project Pages & Features

i. Home Page (index.html)

- Hero section with background image
- Navigation bar
- Introduction content with fade-in animation
- Footer with links

ii. About Page (about.html)

- Timeline layout with scroll-triggered animations
- Personal mission, learnings, creativity, and final thoughts
- Sticky navbar for navigation

iii. Gallery Page (gallery.html)

- Responsive image grid
- Captions for each image

- Hover effects on images
- Aesthetic and animated layout

5. Hosting the Website

The website was hosted using GitHub Pages by uploading the HTML files to a public GitHub repository and enabling GitHub Pages from the repository settings.

6. Conclusion

This project helped me learn the real-world applications of HTML and CSS. I explored animations, layout design, and responsiveness while showcasing creativity and technical skills. Publishing it online using GitHub Pages added professional value to the experience.
